

AQUA PLUS FABRIC BACKED COATING BLANKET

TYREF AQUA PLUS FABRIC BACKED COATING BLANKET

Varnishing blanket for offset coating.

Available in thickness:

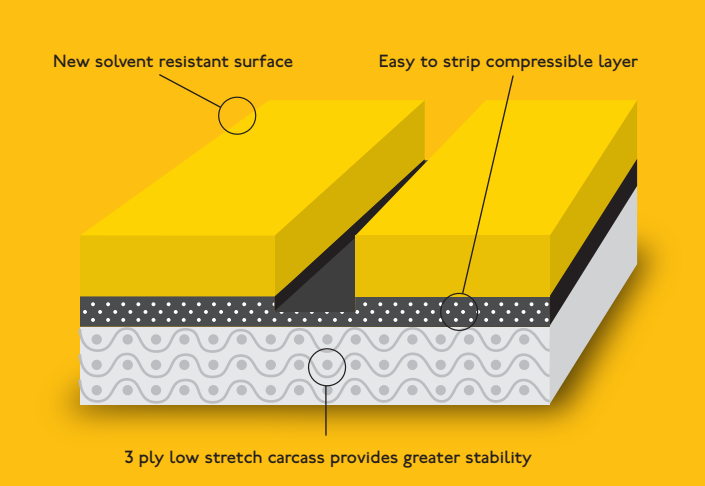

- 1.95mm (0.077")

Available widths:

- 1080mm (42^{1/2}"
- Others upon request

KEY FEATURES

- Suitable for UV and water-based (aqueous) coating applications
- New solvent resistant surface has no ink build up characteristics.
- Easy to strip compressible layer
- Stable 3 ply low stretch carcass
- Clean cut stencil edges
- no loose fibres
- High smash resistance
- Durable, long life

Surface	Rubber buffed
Thickness	1.95mm - 0.077"
Stencil depth	0.9mm - 0.035"
Hardness	68° Shore A
Colour	Yellow
Elongation	< 1.5%
Application	UV and water based coating

UNIQUE CONSTRUCTION

Tyref's new innovative 3 ply construction has no fabric layer between the surface and compressible layer. This unique design offers the printer many benefits over competitors products.

Our construction gives greater smash resistance and no opportunity for fabric impression (orange peel effect) transferring onto the coated sheet. After cutting, the blanket shows no fibres on the cut edge preventing coating and cleaning agents penetrating into the blanket.

Our new solvent resistant surface compound has been developed to completely eliminate ink build up in the water based coating application. The smooth surface gives superior transfer ability, high gloss levels and excellent sheet release characteristics in both UV and Water based coating applications.
